Paper Title

Towards Smarter E-Learning: A Machine Learning Approach to Emotion Recognition and Text Analysis

REVIEW QUESTIONS

1. Reviewer's confidence.

High

2. Does the paper describe the original work

Average

3. Does the work add value to the research of relevant areas?

Average

4. Please write detailed Comments for - Suitability of Title and quality of the abstract. - Adequacy of literature review and proposed methods -Quality of result analysis and conclusion .

☐ In keeping with the main idea of the article, the title, "Towards Smarter E-Learning: A Machine Learning Approach to Emotion Recognition and Text Analysis," seems appropriate.

☐ A concise synopsis of the problem description, methods, and anticipated results is given in the abstract.

☐ However, the abstract omits crucial information on validation trials or outcomes, which are necessary to demonstrate the legitimacy of the suggested approach.

- Adequacy of literature review and proposed methods

☐ A comprehensive evaluation of recent IEEE papers from 2023 to 2024 is included in the report, along with a clear description of its advantages, disadvantages, and potential future research areas.

☐ Tabular summaries of earlier research are organized nicely and facilitate a thorough comprehension of the state of the field.

☐ The suggested methodology focuses on sentiment analysis using BERT/RoBERTa on Devanagari text and emotion identification using CNNs, LSTMs, and OpenCV.

☐ The models and methods chosen are both technically sound and appropriate for the context of online learning.

☐ The paper reads more like a conceptual framework than a completed study because it lacks empirical validation, implementation details, datasets, and performance measures, despite its well-defined methodology.

-Quality of result analysis and conclusion

☐ One major drawback of the study is the absence of an experimental results section.

☐ There are no model validations. confusion matrices. training information. or accuracv
