Paper Title

LabView and DAQ based data monitoring in real time PV solar cell

REVIEW QUESTIONS

1. Reviewer's confidence.

High

2. Does the paper describe the original work

Low

3. Does the work add value to the research of relevant areas?

Low

4. Please write detailed Comments for - Suitability of Title and quality of the abstract. - Adequacy of literature review and proposed methods -Quality of result analysis and conclusion .

The paper demonstrates a basic implementation of LabVIEW-DAQ based PV monitoring but lacks novelty, technical depth, and experimental rigor. It is more of an undergraduate-level project report than a research-level contribution.

Authors are suggested to

1. Highlight what differentiates this work from earlier LabVIEW-based PV monitoring systems.
2. Provide experimental validation: voltage-current-time plots, irradiance-temperature-performance correlation, efficiency tracking under varying conditions.
3. Include error margins, DAQ sampling rates, and comparison with alternative monitoring approaches (e.g., Arduino/ESP32 IoT-based systems).
4. Discuss scalability—how this system could be adapted for industrial PV plants.
5. Strengthen the conclusion by presenting actual findings instead of repeating objectives.

5. Overall evaluation.
